

Nucleus Software Recognized amongst the World's top 5 Mobile Banking Solution Providers in Independent Research Firm's Report

Commended as the only provider with dedicated focus on mobile based retail lending requirements

New Delhi, India 14 Jan, 2016 — Nucleus Software, the leading provider of lending and transaction banking solutions to the global financial services industry, today announced that it has been recognized as one of the five most significant mobile banking solution vendors by Forrester Research, Inc. in **The Forrester Wave™: Mobile Banking Solutions, Q4 2015**.

The Forrester Wave report authors evaluated the strengths and weaknesses of the top vendors against a comprehensive set of 35 criteria, covering strategy, current offerings, and market presence. In the survey, a growing number of decision-makers named mobile banking as one of the initial focal areas of transformation for their application landscape. Focused on retail lending, Nucleus Software's solution was evaluated alongside four general purpose mobile banking solutions.

In The Forrester Wave™ report, Jost Hoppermann, Vice President, Principal Analyst, wrote – “It is an achievement to become a Contender in a Forrester Wave with five modules that are entirely dedicated to serve mobile retail lending requirements while competing with four general purpose mobile banking solutions.”

Mr. Vishnu R. Dusad, CEO, Nucleus Software said, “Customer behaviour is changing. Banks and financial institutions need to digitize and mobile banking solutions are at the forefront of the transformation. With three decades of experience helping banks transform we know that significant performance gains can be achieved with surprisingly small, targeted investments. We are delighted to be recognized by Forrester Research in this report.”

Powered by a robust, secure platform, the solution is designed to rapidly enable banks' mobility strategies while providing a future-proofed solution. It supports Android, iOS, and Windows for native mobile apps. The solution has won various awards from Celent, Asian Banker and Retail Banker International and is currently being used by more than a dozen Banks and Financial Institutions in 5 countries. To date, transactions worth more than \$1.8 billion have been processed by the system.
