Crafting Success in Supply Chain Management with FinnAxia™ FSCM

Corporates have long grappled with an imbalanced approach to optimizing their supply chain operations. While a significant amount of time and resources are dedicated to managing the physical aspects of the supply chain, there has been a noticeable lack of focus on integrating it with the financial dimension. This disconnect often results in inefficiencies, delays, and missed opportunities while managing working capital. Corporations need a solution that bridges this gap, providing a holistic approach to supply chain management that incorporates financial processes seamlessly.

Automate Payments

Automate due date payments for seamless invoice handling, improving financial efficiency and accuracy. Streamline financing loan repayments for financed invoices, optimizing financial processes.

Real-time Updates

Receive real-time email and SMS notifications for transaction updates. Check finance request limits instantly. Access loan details, including tenure, interest rate, and amount with loan simulation.

Seamless API Integration

Simplify and automate processes with API integration for invoice and PO creation, loan initiation, loan inquiry, invoice cancellation, and invoice payment.

Limit Management

Efficiently track, update, and manage limits through an online interface.

Loan Processing and Repayment

Loan processing available with various stages and validations, ensuring accurate and secure transactions. On loan maturity date, system automatically processes loan repayments, simplifying the repayment process.

Purchase Order & Invoice Lifecycle Management

FinnAxia™ FSCM offers complete lifecycle management for purchase orders and invoices, including manual and automated acceptance. Access ledger data for consolidated information on initiation, acceptance, finance, and loan status.

Comprehensive Financial Supply Chain Management

FinnAxia™ e-FSCM caters to treasury department requirements, offering supply chain finance and document management. It optimizes working capital, enhancing collaboration among corporates, suppliers, and dealers to deliver added business value.

Electronic Invoice Presentment and Payment (EIPP)

Electronic presentment of invoices and POs with automated or manual acceptance ensuring a hassle-free experience. Offers dynamic discounting, enabling buyers to make early payments in exchange for a discount.

Role Based Workspaces

Customized welcome dashboards for user roles. Receive role-specific high-level alerts instantly. Strengthen security and customization with robust role-based access control.

Enhance Total Experience with Digital Compass

Efficient self-service for supplier and dealer invoice and finance requests. An interactive, customizable dashboard meets user and customer needs. Corporate users can simulate loan closures with external system integration. The FSCM limit widget displays financing limits, while loans can be initiated through various channels.

Driving Robustness with In-built Engines

Pricing engine

Dynamic and feature-rich pricing engine empowers banks to easily levy various fees and charges on corporate customers.

Accounting engine

Configurable accounting setup (CASA/GL, online/batch) for loan requests, loan payments, interest posting, fee posting, and more.

Interest engine

Set up interest types, calculate interest, and retrieve it as per the loan configuration.

Report engine

Access a wide range of pre-canned and customized reports to monitor and make informed decisions.

Results with FinnAxia™

\$60 millions value of transactions processed in a month.

19.5-million monthly volume of transactions.

37% increase in customers onboarded annually.
